

#### Layers

The original roof will stay **intact**, only the substructure for the solar panels, and if needed, some small incisions for light & greenery or for an elevator. On the ground floor there will be place for the **housetrains** and **recreational vehicles**. The floor up is a small village on stilts, more **community focussed** and **stationary functionalities**. Cafes, co-working spaces, but also some units for people who want to have a **definitive place** to live.

#### Diversity

The hubs form a place where people from **all cultures**, backgrounds and age groups are welcome. People with children and people of age might prefer a longer term option within the hubs, where other people might want to move around every few days. This mixture of people creates a surrounding where **people can feel accepted** and **learn from others**.
